BIOGENA

ESSENTIALS

Sodium Selenite 200 µg

The selenium booster with 200 µg selenium in the easily absorbed, inorganic sodium selenite form

PRODUCT DESCRIPTION

To support the selenium supply

Selenium – an important component of the antioxidative network
Selenium is an essential trace element that was discovered in 1818 by the Swedish chemist Berzelius. It was named after the Greek moon goddess, Selene, due to its silver-grey brilliance. The essential trace element is a part of many enzymes and proteins. Thus, selenium plays a role in the regulation of thyroid metabolism, supports the maintenance of normal hair and nails and contributes to the protection of cells against oxidative stress as a component of the antioxidant network.

Sodium Selenite 200 µg
Biogena Selenite 200 supplements the nutritive selenium intake with 200 µg selenium in the form of sodium selenite. The trace element selenium contributes to the protection of the cells against oxidative stress. The immune system and the thyroid gland also need selenium to maintain their functions.

Physiological importance of selenium:

- Selenium contributes to protecting cells against oxidative stress
- Selenium supports the normal functioning of the thyroid
- Selenium contributes to maintaining normal hair and nails
- Selenium contributes to the production of healthy sperm and is therefore important for fertility in men
- Selenium also contributes to the normal functioning of the immune system

- Highly dosed & bioactive
- Better utilizable than organic selenium
- Antioxidant involved in cell protection
- Supports normal thyroid function
- The immune system also needs selenium
- 100% vegan

POSSIBLE USES

- As a nutritional contribution to the protection of cells against oxidative stress from free radicals
- To support normal thyroid functions
- For the targeted supply of the trace element selenium
- As a nutritional contribution to the maintenance of normal hair and nails
