SenoCetin active Gold

Senolytically effective special complex with fisetin and quercetin to reduce senescent cells

PRODUCT DESCRIPTION

SenoCetin active Gold: With selected plant extracts.
SenoCetin active Gold expands our exclusive gold range with another innovative premium preparation with its finger on the pulse. Developed in cooperation with experts on the basis of the latest scientific findings, SenoCetin active Gold contains the three valuable plant substances fisetin, quercetin and L-theanine.
The natural substance fisetin, a flavonoid, is currently the subject of intensive research. The yellow plant pigment is named after the wig bush, also known as fisetholz – an adaptable shrub that thrives on rocky and dry slopes.
The secondary plant substance quercetin has also been the focus of research for some time – with promising results. The "king of flavonoids" is used here as the branded raw material Quercefit®, which is optimally bioavailable thanks to protected Phytosome® technology.
The special extra is provided by green tea extract in the form of the branded raw material Sunphenon®, which is rich in L-theanine, also known by some as the "secret of green tea". This non-essential amino acid gives the hot drink its unique taste, and the leaves of the tea plant are practically the only source of this valuable natural substance.
SenoCetin active Gold provides an ingenious combination of these three plant substances, which are currently the subject of much research, and thus offers a well thought-out option for daily supplementation as part of a personal wellbeing routine.

SenoCetin active Gold

- Ingredients at the cutting edge
- Developed on the basis of the latest scientific findings
- Contains fisetin from the eponymous fisetin wood (wig bush)
- With L-theanine from patented green tea extract (Sunphenon®)
- With top bioavailable quercetin from the unique branded raw material Quercefit®

- Innovative special complex for the inhibition and reduction of senescent cells, which accumulate with age and accelerate the ageing process
- Enables the targeted supply of the senolytically active plant substances fisetin and quercetin. Senolytics contribute to the dissolution of senescent cells.
- Developed in cooperation with the longevity expert Prof. Dr. Kleine-Gunk on the basis of the latest scientific findings
- The unique branded raw material Quercefit® provides quercetin, which has optimum bioavailability thanks to protected Phytosome® technology.
- With the neuroprotective amino acid L-theanine from patented green tea extract (Sunphenon®)

POSSIBLE USES

- For the targeted supply of the valuable plant substances fisetin, quercetin and L-theanine
